SABA KHARABADZE, PHD

sabakharabadze.com | s.kharabadze@gmail.com | linkedin.com/in/kharabadze | Google Scholar
Pisa, Tuscany, Italy

EDUCATION

PhD in Physics
Binghamton University, State University of New York — May 2024
Dissertation: Machine Learning and ab initio insights into the design of lithium-based materials.

Bachelor of Science in Physics
Free University of Tbilisi — May 2017
Minor in Computer Science and Mathematics

SKILLS

Technical Skills Machine learning, neural networks, Python (PyTorch, JAX, pandas, NumPy, SciPy), C/C++, git, Docker, GPU computing (CUDA, multi-GPU training), distributed training, HPC systems, Linux system administration, shell scripting, materials modeling: DFT (VASP, Gaussian), SQL

Languages English (native/bilingual), Russian (proficient), Georgian (native/bilingual)

ACADEMIC EXPERIENCE

Research Scientist ∘ ***CNIT RaSS Lab*** - *Pisa, Italy* — April 2025 - present

- Utilizing ML approach for radar signal processing and target detection.
- Building simulation frameworks for coverage analysis of mono- and multistatic radar systems.

Physics AI model validation expert ∘ ***Handshake MOVE Program*** - *Remote* — August 2025 - present

- Creating reasoning problems and solutions for AI models to challenge their physics knowledge.
- Evaluating AI model responses and providing feedback to improve their understanding of physics concepts.

PhD Candidate ∘ ***Binghamton University*** - *Binghamton, NY* — August 2018 - August 2024

- **Discovery of new Li-Sn phases with machine learning** — November 2020 - May 2022
  - Generated large-scale **DFT** reference datasets using **VASP** and used them to parameterize a **neural network** model written in **C** for the Li-Sn system.
  - Built and operated a high-throughput, massively parallel HPC pipeline to generate >1M samples and 1TB of results; implemented reproducible run tooling (automation, configuration, logging/metadata, structured outputs) to reliably launch, monitor, and post-process large campaign runs.
  - Developed **Python** pipelines for scalable data processing and analysis, transforming raw numerical outputs into derived metrics and summary artifacts for downstream decision-making.
  - Identified 8 new stable structures that redefined the previously known convex hulls for Li-Sn system for ambient and elevated pressures.
  - Conducted **phonon** calculations at ML and DFT levels to assess and confirm stability of newly discovered structures at elevated temperatures.
  - First authored and published the manuscript in Nature Partnered Journals Computational Materials under the title: "*Prediction of stable Li-Sn compounds: boosting ab initio searches with neural network potentials*".
- **Stability analysis of potentially superconducting LiBC compounds** — August 2022 - February 2023
  - Calculated Li chemical potential in Li_xBC to estimate conditions required for delithiation of LiBC parent material.
  - Examined B–C phases to explain metastable BC_3 polymorphs with honeycomb and diamond-like morphologies.
  - Employed evolutionary optimization and rational design to identify more natural and favorable Li_2B_2C configurations, still above thermodynamic stability threshold.

- Conducted **phonon** calculations in the quasi-harmonic approximation framework to gain further insight into stability at varying volumes and assess contribution of anharmonic effects.
- First authored and published the manuscript in Physical Chemistry Chemical Physics under the title: "*Thermodynamic stability of Li–B–C compounds from first principles*".

- **Implementation of *NPT* barostat molecular dynamics module** January 2020 - May 2020
  - Implemented and integrated an *NPT* barostat feature in **C** within a large in-house codebase (MAISE: https://github.com/maise-guide/maise); profiled hotspots and optimized performance-critical paths.
  - Designed automated validation and regression tests; verified numerical correctness and stability against reference benchmarks (e.g., material expansion behavior) within 10% of experimental values.
  - Coauthored the resulting paper where I wrote the section regarding molecular dynamics. Paper was published in Computer Physics Communications under the title: "*MAISE: Construction of neural network interatomic models and evolutionary structure optimization"*.
- **Development of documentation website for group's software MAISE** May 2020 - August 2020
  - Developed wiki in **Python** using Sphinx library that is now hosted on https://maise.binghamton.edu/wiki/.
  - Wrote the section about **molecular dynamics**.
- **Working as a university computational system administrator** August 2020 - May 2021
  - Administered two university-wide **HPC Linux** computing clusters each with over 1,000 cores and **GPU nodes**.
  - Installed and maintained various computational software including **Intel** and **GNU** compilers, **Python**, **PyTorch**, **NumPy**, **SciPy**, **Jupyter**, **OpenMPI**, **CUDA toolkit**, **VASP**, **ORCA** and others. Set each software up for parallel multi-node and multi-GPU use.
  - Configured job scheduling systems and resource allocation for distributed computing workloads.

PROFESSIONAL EXPERIENCE

Back-end Developer ∘ ***Eleven Wireless*** - *Portland, OR (remote)* October 2017 - April 2018

- Developed a **Python** middle layer interfacing **SQL** databases and **ElasticSearch** engine.
- Deployed and maintained ticket reporting project on **AWS** Linux instance. The reporting portal was constantly online with live patching.

Junior Business Analyst ∘ ***TBC Bank*** - *Tbilisi, Georgia* May 2017 - February 2018

- Constructed flow diagrams for ATMs while working in an innovations team.
- Wrote system documentation for software engineering side while working within Scrum framework.

Software Engineer Intern ∘ ***Bank of Georgia*** - *Tbilisi, Georgia* May 2016 - December 2016

- Learned the software development foundations of the bank, got acquainted with the day-to-day process of problem setting and implementation.

TEACHING EXPERIENCE

Teaching assistant in general physics ∘ ***Binghamton University*** - *Binghamton, NY* August 2018 - August 2020

- Taught intro physics as a TA and achieved 85% positive feedback with 67% participation.
- Instructed new TAs as a head teaching assistant during the second year.

Coach of physics team ∘ ***42nd School of physics and mathematics*** - *Tbilisi, Georgia* September 2012 - May 2018

- Coached a class of high school students for physics competitions. Students got awarded multiple medals in local and international competitions.
- Lead the school team of 11 students at the 2016 International Zhautykov Olympiad in Almaty, Kazakhstan. Our team got awarded with silver medal in physics and mathematics.

HONORS AND AWARDS

- Handshake AI Fellow, *Handshake MOVE Program* August 2025 - present
- Travel grant to present at APS March meeting, *SUNY Binghamton University* March 2022, 2023
- Merit-based tuition scholarship, *Free University of Tbilisi* August 2012
- Bronze medal, *43rd International Physics Olympiad (Tallinn, Estonia)* July 2012
- Bronze medal in physics, *8th International Zhautykov Olympiad (Almaty, Kazakhstan)* January 2012
- Honorable mention, *42nd International Physics Olympiad (Bangkok, Thailand)* July 2011
- 1st place in national physics olympiad, *Tbilisi, Georgia* May 2007, 2008, 2010
